Retail Sales Dashboard

Project Report

Prepared from the Excel/WPS workflow discussed in ChatGPT conversations

Project type: Excel-based data cleaning, analysis, and dashboard reporting

Report date: 29 October 2026

Status: Draft — verify the final workbook and figures before submission

Important note

This report is reconstructed from the conversation notes and screenshots described in the chat. It does not independently inspect the latest workbook. The KPI figures below are the values previously visible in the conversation and should be checked against the final Excel file before submission.

1. Project Overview

The purpose of this project is to turn retail transaction data into a clear Excel dashboard. The workflow discussed includes checking and cleaning data, building PivotTables, summarizing revenue and customer/order metrics, and presenting results with charts.

2. Workbook Structure

Sheet / area	Purpose discussed
Raw_Data	Original transaction data; retain as the source copy.
clean_data	Cleaned fields and data-quality checks.
Analysis	Area for calculations and supporting analysis.
PivotTable sheets	Summaries such as monthly revenue, country revenue, and top products.
Dashboard	KPI values and charts arranged for a quick overview.

3. Data Cleaning Work Discussed

- Reviewed cleaned date, revenue, quantity, customer ID, and country fields.
- Used a duplicate-check column and a data-quality indicator to help identify records needing review.
- Discussed removing duplicate records and checking date sorting/formatting.
- A value such as TRUE and a count of 1,183 appeared during checking; those results should be validated against the workbook's intended formula and dataset.

4. Analysis and Dashboard Components

Component	Details from conversation
Total Revenue	1,347,604.73
Total Orders	2,452
Total Customers	1,150
Total Quantity	653,838
Monthly Revenue PivotTable	Dec 2010: 823,746.14; Jan 2011: 523,858.59; Grand Total: 1,347,604.73
Country Revenue	A country-based revenue PivotTable was created/discussed.
Top 10 Products	PivotTable using product description as rows and cleaned quantity as values; filtered to Top 10 by quantity.
Charts	Top 10 Products chart and Monthly Revenue Trend chart were arranged on the Dashboard.

5. Steps Completed or Discussed

1. Reviewed the workbook sheets and cleaned-data columns.
2. Worked through duplicate/data-quality checks and date sorting issues.
3. Created or reviewed PivotTables for monthly revenue, country revenue, and top products.
4. Confirmed dashboard KPI values visible in the conversation.
5. Added/positioned charts for Top 10 Products and Monthly Revenue Trend.
6. Filtered a #REF! entry out of the Top Products PivotTable; final refresh and visual verification remain recommended.

6. Recommended Final Validation

- Refresh all PivotTables and charts after any data changes.
- Check that no #REF!, #VALUE!, or unexpected blank categories appear in the charts.
- Confirm the revenue total agrees between the KPI card and the PivotTable grand total.
- Check the date field is a real date and that monthly labels are sorted chronologically.
- Save a clean final copy of the workbook and keep the original raw data unchanged.
- Replace any estimated timesheet entries with actual time spent before submitting.

7. Suggested GitHub Repository Contents

Upload the project workbook only if you are allowed to share the data. If the workbook contains customer names, IDs, invoices, or business-sensitive records, anonymize/remove them first or use a small synthetic sample. A sensible repository can include: README.md, the final dashboard workbook (if safe to share), project report PDF, timesheet CSV, screenshots of the dashboard, and a .gitignore file. Do not upload passwords, API keys, private customer data, or confidential source files.

8. Conclusion

The project demonstrates a basic Excel data-analysis workflow: cleaning transaction data, summarizing it with PivotTables, calculating KPIs, and communicating trends through charts. The dashboard should be treated as a draft until the final workbook is refreshed and all figures are verified.
